

# How to clear the Delta cache

---

I have had trouble loading the Delta flight plan in iCrew. I found that clearing the cache fixed the problem. I still get the text centered instead of being left justified. However, it works fine when pasted into my site.

Step 1 Close any Delta Tabs

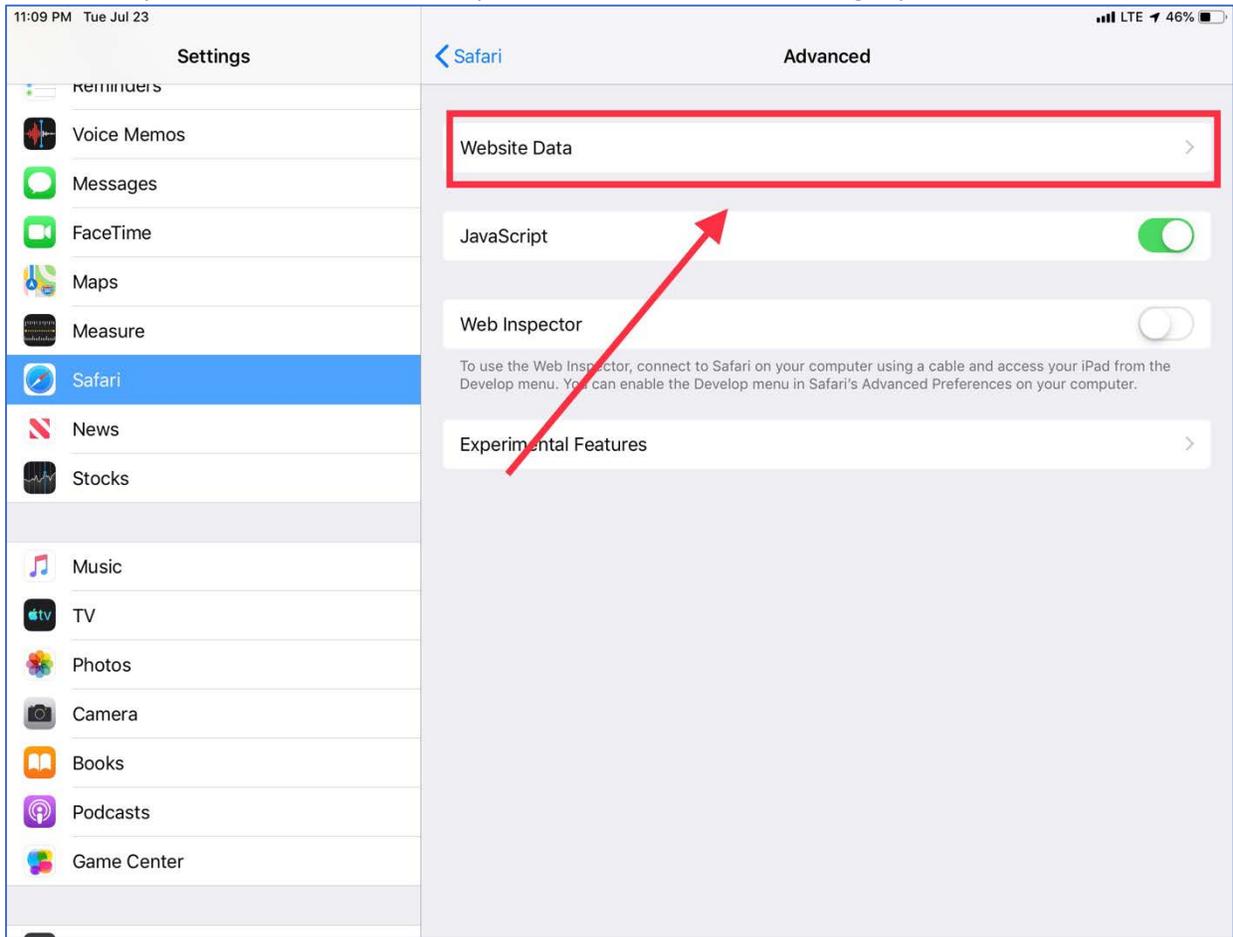

Step 2 Go to Settings

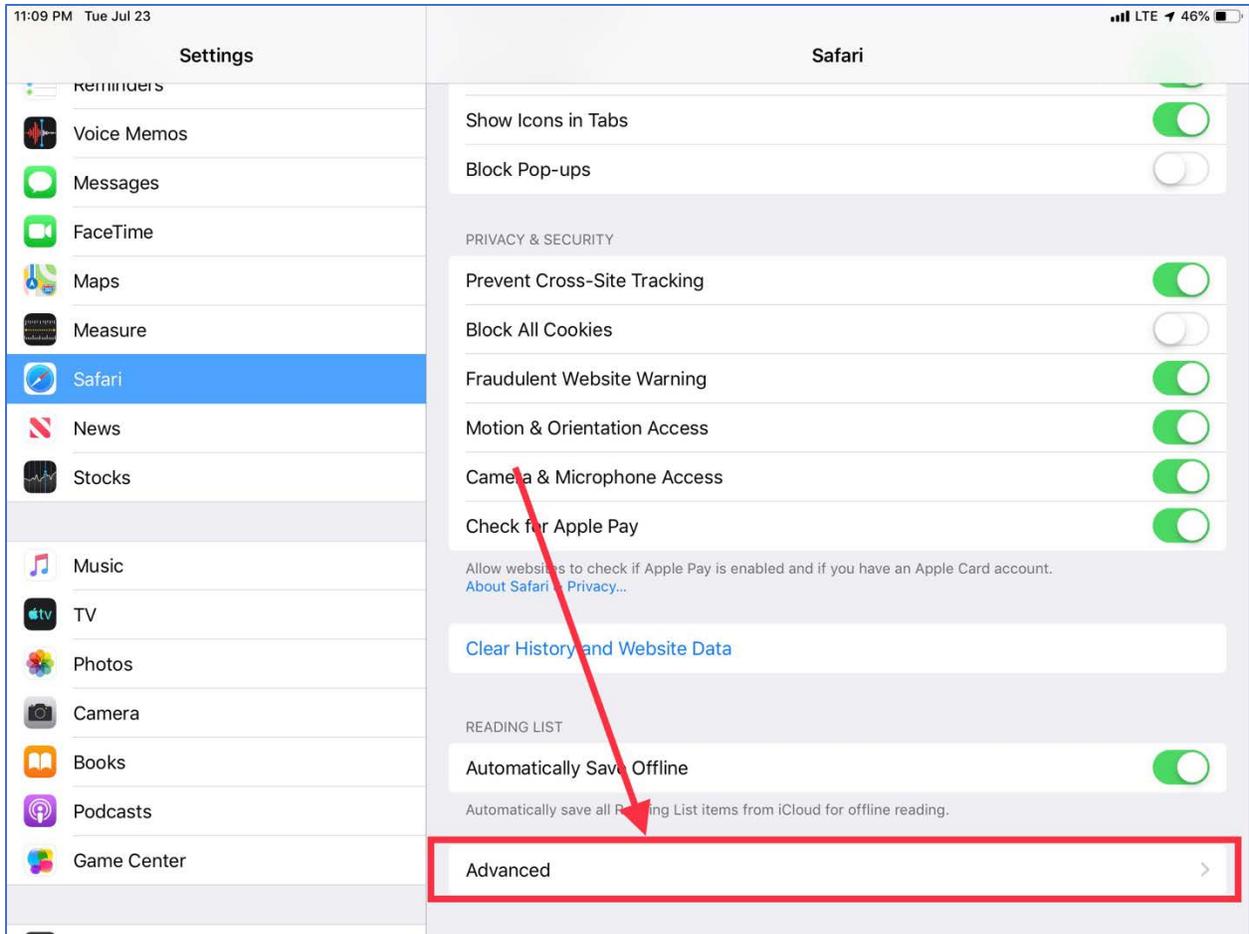

Step ... Follow the screenshots in the following pages.

I hope this helps.

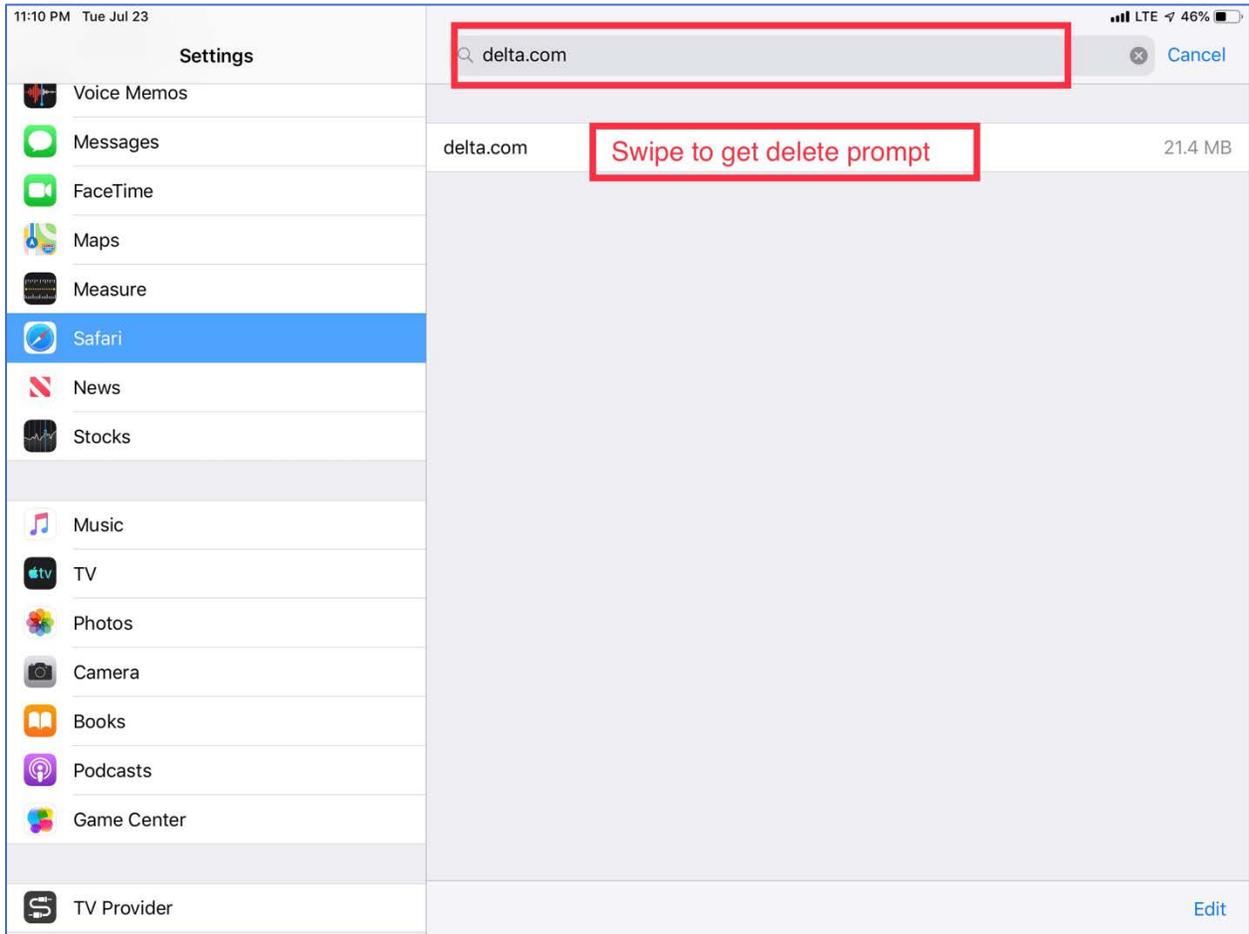

John Bell

The first step is choose Safari in the left pane and Website Data in the right pane.

Swipe from right to left to get he “Delete” prompt.

Once you delete the website data, iCrew should work normally when you log in again.
